Add-on module: Bondispro

extra office workplace
 (on additional PC)

This module allows you to move all accounting and control functions away from the cash register, to your office. You can also do random sampling whilst in operation, print reports, change prices and items or prepare campaigns and store these for automatic activation. All reports and lists can be printed manually or automatically on an A4 printer. And it is also possible to transfer data to other Office programs (Excel, Access etc.) for further processing. (VPN connection possible via DSL under Windows 2000 / XP / VISTA)

Add-on modules:

You will need this module if (in addition to normal tracking of sold items) the flow of goods must be checked in the main or secondary stores. To this end, capture the requisite additional information (purchasing prices, purchased quantities in litres, units or kilograms) in the stock list, maintain a supplier register and set up minimum and maximum stock levels. The module also generates ordering suggestions per supplier, which you can pass on directly to your suppliers.

The recipe enables the user to break down the mixed drinks into its ingredients.

The calculation facilitates the compilation and control of purchasing prices, profit margins, mark-up etc. The sales plan simulations provide statistics which reflect the business also from other perspectives.

You can keep a check on each staff member's actual working hours with this module. Each staff member can check in and check out at a point-of-sales terminal – even without a waiter's key. These records can be used as the basis for payroll accounting.

Terrace businesses, beer gardens etc. are ideally suited to operate more efficiently using this module. The waiter rings up the order directly at the guest's table, using a walkie-talkie. The sales slips are printed immediately in the kitchen or at the counter, enabling the waiter to carry on with his work without interruption, significantly reducing throughput time.

This module enables automatic take-over or handover of bar items. The items are taken over from the cash register programme and automatically booked and charged. Interfaces to Gruber, WMF, Walla, Schärf, Brauunion, Pegasus, TBT, ...

This module administrates all credit postings. Accounting is not daily, but by collective billing at the end of an accounting period. This module is also suitable for small accommodation businesses without own hotel software for room administration.

This module organises data exchange between the point-of-sale and the hotel program. Checked-in rooms are shown at the cash register and sales registered on the hotel bill as additional services. You always know which rooms are currently free to be booked. Interfaces to Fidelio, HS/3Deltra, GastroDat, Page, Hotline, Protel, Casablanca, Malibu, Velox, ...

**Store management,

GASTROTOUCH

GastroTouch is the ideal point-of-sale solution for the catering business. The software is very quick and simple to use - precisely what waiters and caterers need when operating close to their working limits.

GastroTouch is intuitive to operate, i.e. even temporary staff can enter orders straightaway. To the user, the cash register appears uncluttered, free of data, although such data plays its vital role in the background.

The convenient administration part is deliberately kept in the background, but accessible at all times to the person who specifies and changes items, checks statistics and sales, inspects and prints lists or updates staff data.

GastroTouch runs under Windows 2000 / XP / VISTA.

Functional description – basic module

MASTER DATA

- Stock master data (item description, preparation methods, EAN code)
- Category master data
- Category sub-groups
- Waiter master data/waiter authorisation
- Graphic table plan (raster programming)
- Table zone master data
- Rooms master data
- Customer base (birthday function)
- Company master data

RINGING UP VARIANTS

- Table
- Room (detailed bill for extended period)
- Regular guest
- On account guest (monthly bill, collective bill)
- Event
- Transfer possible in any direction
- Buslogic

ADDITIONAL FUNCTIONS

- Table transfer
- Table hand-over (waiter change)
- No-sale receipt (steak/fish orders)
- Free price entry
- Fax function
- Serving sequence automatic on advertising voucher
- Call-up order (call up courses automatically)
- Bondispo (kitchen sales slip displayed on screen)
- Cash register switchover to self-service or mixed operation
- Different price levels (7), also linked to table zone
- Item discount freely definable
- Customer-specific price or discount
- Invoice discount
- autom. splitting of invoice (split among several persons)
- Happy hour functionality
- Ancillary invoices
- Street trading
- Collection/delivery service functionality

- Repeat invoice printout, invoice archive
- Credit note administration (remaining balance control, history)
- Administration of outstanding items

STATISTICS

- Acc. to day, week, month and year
- Daily accounting, overall or waiters
- Category / item, overall and waiters
- ABC analysis optional acc. to sales or profit margin
- Sales-time analysis
- Table analysis
- Recipe statistics
- Compilation of movement types (invitation, own consumption, staff etc.)
- Invoice slip journal
- Waiter time journal
- Waiter control list
- Lists of waiters
- Profit margin analyses

MISCELLANEOUS

- Sales simulations based on past values
- Pre-recording of new selling prices
- Automatic monthly selling price archiving

DATA SECURITY

- Total data security through creation of dual files

INTERFACES TO

- Scales (Mettler Toldeo, Bizerba)
- Card readers (Legic, PCS, Ordercard, Fage, PC-Caddy,)
- Waiter key systems (Dallas, Steingress, WMF, Addimat, Micros)
- Barcode scanners
- Inventory management (Kost, MS-Navision, PC-Küche)
- Customer displays
- ATM/credit card systems
